

SONAX®

PUMP VAPORISER

solvent resistant - red (1,5 litres)

Art. No. 496 900

Special formulas and raw materials necessitate different versions of processing equipment. The **SONAX Pump Vaporiser solvent resistant** is suitable for the products listed on the back. For all water-soluble (acidic and alkaline) formulas, SONAX offers the **SONAX Pump Vaporiser for acidic and alkaline products (Art. No. 496 941)**.

Please be sure to note this difference to avoid unnecessary damage to the device!

INSTRUCTIONS FOR USE:

1. Fill with cleaning agent up to the "Max" mark.
2. Put the pump head on and tighten it finger-tight. Make sure it is airtight - otherwise pressure cannot build up.
3. Pump air into the bottle with the pump piston.
4. For spraying, press the spray button on the grip. Pump again, if necessary.
5. The desired spray pattern can be adjusted by turning the nozzle screw (mist/stream).
6. If liquid is dripping from the nozzle after the spray button has been released there is still air in the vaporiser. To let the air escape, spray at an upward angle for 2-3 seconds.

CARE AND MAINTENANCE:

- When finished, slowly and carefully unscrew the spray head so that the pressure can escape; then spray until the nozzle is empty. Never leave the container when it is under pressure!
- To increase the lifespan of the device, regularly oil the piston rod (see arrow on the spray button), e.g. with SONAX MoS₂Oil NanoPro or SONAX SX90 PLUS.
- Regularly check whether the nozzle screw and screen are free from deposits. Clogged nozzles can be cleaned with a needle.
