LIGHT DISTRIBUTION

ECE Ref. 37.5

Mounted: upright

Lux is the unit of illuminance.

It expresses the luminous flux from the light source that impinges on a specific area. For example, an office should be illuminated with at least 500 lux, and the human eye can still read a newspaper without any problems at 1 lux. The values underneath the lux axis show at which point of the light distribution diagram the corresponding illumination intensity is reached.

Ref. 50, 40, 37.5, 17.5 and 12.5:

The reference number (Ref.) is a figure that applies to a spotlight. Under ECE regulations, this reference number may not exceed the upper limit of 100 per vehicle. This figure includes the values for the two standard high beams (left and right headlights) plus those of any other installed spotlights. The appropriate value is engraved on the lens of each approved headlight.
